Usage of REST APIs in CKYC-Client

We already kept BLOCKCHAIN API URL as "localhost:5000" and you can edit host name/URL from settings.py with string name BLOCKCHAIN_URL.

Given API used at given underlying lines in workflow/views.py file.

1 . Add new CKYC details
        Used at Line No: 92
        Function name: accept_txn_details

2. Update CKYC details
        Used at Line no: 124
        Function name: accept_txn_details

3. Query ckycId
   a. Check If, ckycId is already in chain
        1. Expected return status code: **200**
        2. Used at Line no: 226,260,354,374
   b. Check If, Blockchain Server is down
        1. Expected return status code: **503**
        2. Used at Line no : 265,374

Note: Please make sure we are getting EXPECTED STATUS CODES while querying ckycId.
